

TDD Workflow — Quick Reference

SPEC → TEST:PLAN → TEST:RED → TEST:GREEN → REFACTOR → REVIEW → PR → SHIP

Starting Work	
SPEC name: desc	Start new cycle
SPEC:REVIEW	Show spec for approval
SPEC:APPROVE	Lock spec, begin testing
SPEC:AMEND x	Modify spec mid-cycle
Testing	
TEST:PLAN	Design tests from spec
TEST:RED	Write failing tests
TEST:GREEN	Implement until pass
TEST:REFACTOR	Clean up, tests stay green
TEST:RUN	Execute test suite
Review	
REVIEW	Spawn expert agents
REVIEW:FIX 1	Apply specific fix
REVIEW:FIX all	Apply all fixes
REVIEW:ACCEPT	Move to PR as-is
Status & Finish	
WHERE	Current cycle status
CYCLES	All active cycles
PR	Create pull request
SHIP	Merge after approval
ABORT	Abandon cycle

Example Session	
You:	SPEC search: Users search by title
Johnny:	Created cycle. Draft spec: – Search by title – Return paginated results Approve or adjust?
You:	SPEC:APPROVE
Johnny:	Spec locked. TEST:PLAN ready. Say TEST:RED to write tests.
You:	TEST:RED
Johnny:	6 tests written, all failing.
You:	TEST:GREEN
Johnny:	Implementing... 6/6 passing.
You:	REVIEW
Johnny:	🔴 High (auto-fixed): N+1 query 🟡 Medium: Missing rate limit REVIEW:FIX all or REVIEW:ACCEPT?
You:	REVIEW:FIX all
Johnny:	Fixed. Tests green. Ready for PR
You:	PR → SHIP

Review Severities			
🔴 Critical = Auto-fix	🟡 High = Auto-fix	🟡 Medium = You decide	🟢 Low = You decide

Rules	
1. Every feature gets a cycle	2. Spec before tests
3. Tests before code	4. Review before PR
5. Never merge without approval	6. Never commit to main
